About

Mission Statement

The Greater Good Foundation is a California 501(c)(3) tax exempt public benefit organization created to bring advanced healing benefits of stem cells at reduced cost, and in certain cases for free to children and low-income adults.

Why We Do This

The founder and organizers of the Greater Good Foundation have been in the stem cell world for over 35 years. In our private practice we know what is medically possible when premium quality stem cells are applied to patients. We have made miracles happen using stem cells for our wealthy patients in Beverly Hills, California. The results are truly mind blowing, even to us. But what about hard-working people? What help is there for patients that cannot afford the high costs of stem cell treatments? Rather than complain about the high costs of stem cells, we have formed this foundation to work with philanthropists and charitable donors to provide life saving and life changing stem cell therapies to patients who cannot afford them. We do this for the greater good.

Stem Cell Clinics

The Greater Good Foundation works with local medical professionals to apply stem cells to patients. Stem cell clinics are available in the following locations:

- Southern California, USA
- Tijuana, Mexico
- Cancun, Mexico

Wharton's Jelly

Stem Cells

What is Wharton's Jelly ?

The umbilical cord is largely composed of Wharton's Jelly. A clear gelatinous substance, similar to the jelly inside our eyes, consisting mainly of collagen and hyaluronic acid, which work together to dampen the physical stresses during pregnancy and development of the baby. Wharton's Jelly is also an abundant source of mesenchymal stem cells (MSCs) that are captured during pregnancy and are the most potent and effective of all stem cells for anti-aging and regeneration of the human body.

Our Wharton's Jelly Stem Cells are minimally manipulated stem cells derived from the Wharton's Jelly of the umbilical cord. A proprietary process is used to preserve the growth and other native characteristics. Our Wharton's Jelly Stem Cells are 100% pure.

Benefits of Wharton's Jelly Stem Cells

Wharton's Jelly Stem Cells are unsurpassed in their ability to:

- Regenerate internal organs, regenerate joints, and regain brain function
- Increase metabolic energy through mitochondrial transfer to the patient
- Naturally detect and destroy cancer

Our proprietary Wharton's Jelly stem cell protocol can restore function of internal organs, regain brain function and eliminated body and joint pain.

Quality & Custody

We take control and custody of the umbilical cord moments after a healthy baby is born. We then transport, process, cryofreeze and deliver the finished cell product directly to local medical professionals that we know and trust. At no point do we permit third parties to take control of our product. Over the years we have found this to be the best way to assure to our patients that they are getting the absolute best stem cell product available. We do not purchase umbilical cords from brokers, nor do we ship our cellular products to distributors.

All umbilical cord donors are pre-screened and undergo rigorous and comprehensive testing that includes:

- Behavioral risk assessment
- Physical assessment
- Donor medical history
- Communicable disease testing

Infectious disease testing is performed at certified laboratory in accordance with the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and 42 CFR part 493.

Cord Blood Stem Cells

What is Cord Blood Stem Cells ?

Stem cells were first identified in cord blood over 40 years ago. Since then cord blood has been used routinely for hematopoietic stem cell transplantation. Cord blood contains a mixed population of cells, including hematopoietic stem cells (HSC) and mesenchymal stem cells (MSC). These cells have the capacity to self-renew, release growth factors, and further develop into more specialized cells. These cells have also been associated with contributing to tissue homeostasis, reducing inflammation and having antioxidant properties.

(Umbilical) Cord Blood Stem Cells are minimally manipulated human stem cells derived from umbilical cord blood. A proprietary process is used to preserve the tissue characteristics and properties.

Benefits of Cord Blood Stem Cells

Umbilical cord blood stem cells are more aptly suited to boosting the patient's own immune system and helping a patient recover after surgery or illness. The healing qualities of cord blood work best when applied to the patient during the healing and recovery process. Boosting the patient's overall immune system is best achieved with a specialized protocol using cord blood stem cells.

Quality & Custody

We take control and custody of the umbilical cord moments after a healthy baby is born. We then transport, process, cryofreeze and deliver the finished cell product directly to local medical professionals that we know and trust. At no point do we permit third parties to take control of our product. Over the years we have found this to be the best way to assure to our patients that they are getting the absolute best stem cell product available. We do not purchase umbilical cords from brokers, nor do we ship our cellular products to distributors.

All umbilical cord donors are pre-screened and undergo rigorous and comprehensive testing that includes:

- Behavioral risk assessment
- Physical assessment
- Donor medical history
- Communicable disease testing

Infectious disease testing is performed at certified laboratory in accordance with the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and 42 CFR part 493.

Car-T & Car-NK

Cancer Killing Cells

CAR-T Therapy

After some blood is taken from the patient, the T-cells, a type of immune cell, are removed from the sample. Using advanced genetic engineering techniques in our laboratory, the T-cells are modified, causing them to create chimeric antigen receptors (CARs). These CARs program the T-cells to identify and destroy cancer cells when injected back into the patient. The CAR-T cells can be programmed to attack blood cancers and solid tumors.

The patient may receive traditional chemotherapy or opt for our Universal Car-T (Exosomal Car-T) while the patient's modified T-cells grow in our laboratory. The chemotherapy dampens the patient's immune system, permitting the CAR T-cells to do a better job of eliminating malignant cells. Universal Car-T gives a head start to weaken and kill some of the cancer before the Car-T cells are infused.

Car-T + Car-NK

Car-T can be combined with Car-NK to provide an integrated "one-two" punch when attacking cancer.

Universal Car-T (Exosome Car-T)

Exosomes are a new weapon in the fight against cancer. Car-T induced Exosomes are an instantly available product designed to provide an immediate treatment that can be injected to fight cancer on the patient's first visit. This helps bridge the time while the patient's own T cells are being programmed to fight cancer in our laboratory.

CAR-T

Chimeric Antigen Receptor (CAR) T cell therapy is a type of immunotherapy that programs a patient's own T cells, so when they are reinjected back into the patient, they can identify and destroy cancer. CAR-T cell therapy has been extremely effective in patients. The Car T therapy can be programmed for blood type cancers and solid tumor cancers. In some cases, the treatment has eliminated all signs of cancer. With Car-T, the two big "C" words can be used in the same sentence in the English language: Cancer and Cure.

Car-NK

Car-NK (Natural Killer) cell therapy, in addition to genetically modified T cells, has also become a promising immunotherapy for treating blood cancers and solid tumors. NK cells can be obtained from the patient's own blood, or from Umbilical Cord Blood, or both. NK Cells from the umbilical cord provide exceptional cancer fighting properties. Programming cells in the laboratory helps the Natural Killer Cells to activate and fine tune the cancer targeting ability.

Quality & Custody

We take control and custody of the umbilical cord moments after a healthy baby is born. We then transport, process, cryofreeze and deliver the finished cell product directly to local medical professionals that we know and trust. At no point do we permit third parties to take control of our product. Over the years we have found this to be the best way to assure to our patients that they are getting the absolute best stem cell product available. We do not purchase umbilical cords from brokers, nor do we ship our cellular products to distributors.

All umbilical cord donors are pre-screened and undergo rigorous and comprehensive testing that includes:

- Behavioral risk assessment
- Physical assessment
- Donor medical history
- Communicable disease testing

Infectious disease testing is performed at certified laboratory in accordance with the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and 42 CFR part 493.

Exosomes

Nano particles

Exosomes

Exosomes are nano particles secreted by stem cells and contain the chemical instructions for other cells. Exosome secretions is how cells communicate with one another. Our Exosomes are derived from Wharton's Jelly Stem Cells and are engineered for growth and repair or can be modified with Car-T to destroy cancer. Exosomes are isolated from their parent cells and concentrated to produce the desired concentration.

Exosome Benefits

Exosomes are naturally occurring nano particles secreted by stem cells that are essential for cell-to-cell communication. Exosomes can be engineered to enhance certain desired benefits such as cartilage, bone, tendon, etc. In addition, Exosomes can be engineered using Car-T to kill cancer. The benefits of Exosome Car-T are that it can be produced as an immediately available product to be infused into patients literally on the first office visit. It is universal in nature and can be used on anyone.

Quality & Custody

We take control and custody of the umbilical cord moments after a healthy baby is born. We then transport, process, cryofreeze and deliver the finished cell product directly to local medical professionals that we know and trust. At no point do we permit third parties to take control of our product. Over the years we have found this to be the best way to assure to our patients that they are getting the absolute best stem cell product available. We do not purchase umbilical cords from brokers, nor do we ship our cellular products to distributors.

All umbilical cord donors are pre-screened and undergo rigorous and comprehensive testing that includes:

- Behavioral risk assessment
- Physical assessment
- Donor medical history
- Communicable disease testing

Infectious disease testing is performed at certified laboratory in accordance with the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and 42 CFR part 493.

Anti-Aging Stem Cell Protocol

Reverse Aging

Weekly infusions of Wharton's Jelly Stem Cells provide unmatched regeneration in patients to regenerate internal organs, restore brain function, and body pain elimination.

Qualifying & Preparation

It is important to understand what stem cells can and cannot do. For example, stem cells can repair damaged heart muscle, but they cannot clean clogged arteries. Stem Cells can regenerate a worn joint, but they cannot regrow a joint that has been crushed. There are many benefits of which we are still not aware, but we are willing to try a stem cell protocol to see if any benefits can be achieved.

Dental amalgams are toxic to stem cells and should be removed. Removal of amalgams should be followed by a chelation therapy protocol to remove toxic heavy metals before the stem cells are applied. We work with every patient to make sure the best possible results are achieved. Stem Cells help the following:

Internal Organs

Heart: Regenerate weak heart muscle following heart ablation.
Lungs: Emphysema, COPD, bronchitis, Coronavirus, etc.
Pancreas: Eliminate diabetes
Liver: Liver failure, cirrhosis
Kidneys: Restore function and eliminate dialysis
Intestines: Crohn's, IBS, gastritis, colitis, diverticulitis
Eyes: Macular degeneration
Nerves: CIDP, diabetic nerve pain

Brain Diseases

Parkinson's
Alzheimer's,
Dementia
Stroke

Strengthen Immune System

Avoid getting the flu and colds by weekly stem cell infusions. Do not be left vulnerable to opportunistic viruses and bacteria.

Autoimmune Disorders

Arthritis: Psoriatic & Rheumatoid
Lupus
Multiple Sclerosis
Many Others:

Viagra Stem Cells

Patients with diminished erectile performance, not caused by medication or surgery, are ideal candidates to restore normal healthy sexual function. Our male patients that have taken at least 12 weekly stem cell infusions have coined the phrase "Viagra Stem Cells."

We attribute this "secondary side effect" to an overall regeneration of the patient's body. Proper diet, vitamin and mineral protocol to help the patient's metabolism is important.

Female Reproductive System

Weekly stem cell infusions increase female sex drive and rejuvenate internal organs in women nearing the end of their childbearing years. Since stem cells are anti-inflammatory and immunomodulating, we see dramatic benefits in normalization of the metabolic function resulting and feeling like a younger woman.

Quality & Custody

We take control and custody of the umbilical cord moments after a healthy baby is born. We then transport, process, cryofreeze and deliver the finished cell product directly to local medical professionals that we know and trust. At no point do we permit third parties to take control of our product. Over the years we have found this to be the best way to assure to our patients that they are getting the absolute best stem cell product available. We do not purchase umbilical cords from brokers, nor do we ship our cellular products to distributors.

All umbilical cord donors are pre-screened and undergo rigorous and comprehensive testing that includes:

- Behavioral risk assessment
- Physical assessment
- Donor medical history
- Communicable disease testing

Infectious disease testing is performed at certified laboratory in accordance with the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and 42 CFR part 493.
